

CHEYENNE KIM

Gig Harbor, WA • 253-820-7087 • 00cheyennekim@gmail.com • [linkedin.com/in/cheyenne-kim-069908174/](https://www.linkedin.com/in/cheyenne-kim-069908174/)

EDUCATION

University of Pennsylvania, School of Engineering and Applied Science Expected December 2026

Master of Science in Engineering, Data Science

Duke University, Trinity College of Arts and Sciences

Graduated May 2022

Bachelor of Science Computer Science, Cinematic Arts and Visual Media Studies

PROFESSIONAL EXPERIENCE

Centene Corporation

March 2025 - Present

Business Systems Analyst II

Remote

- Administered and optimized the ServiceNow design intake pipeline, building workflows and monitoring process automation to improve intake efficiency and reduce manual overhead.
- Designed and implemented process performance tracking solutions within ServiceNow, leveraging business rules, workflows, and data integrations to surface key operational metrics.
- Developed interactive Power BI dashboards with complex DAX measures to visualize team performance, track SLA adherence, and identify systemic bottlenecks.
- Utilized Python for data wrangling, automation, and advanced analytics, including KPI calculations, trend detection, and process efficiency modeling.
- Built and maintained data pipelines across ServiceNow, SQL, and Power BI, ensuring data quality, consistency, and accuracy of performance reporting.

Goldman Sachs

July 2022 – March 2024

Full-Stack Engineering Analyst

Salt Lake City, UT

- Design, develop, and maintain 25+ scalable applications used to accurately and efficiently monitor \$445bn+ alternative assets in the External Investing Engineering team within the Asset Management division.
- Coded robust front-end solutions in an Agile Scrum structure using Angular, JavaScript, TypeScript, HTML, and CSS, resulting in streamlined and user-friendly interfaces.
- Implemented machine learning models to detect anomalies in trading patterns, enhancing the accuracy of financial analyses and contributing to risk management strategies.
- Designed optimized relational database schemas and managed SQL and MongoDB servers for efficient data storage.
- Conducted critical statistical analysis on years of historical financial data using SQL, Tableau, and Python.
- Managed two summer interns, resulting in a fully deployed data visualization web application.

Pitch Story Labs

January 2020 – May 2022

Director of Production

Durham, NC

Second highest grossing student-run media agency in the U.S. specializing in marketing and video production.

- Managed team of 15 videographers and editors to generate \$200,000+ in revenue for the agency in two years.
- Spearheaded fundraising efforts to raise \$50,000+ in six weeks for Duke's independent newspaper, The Chronicle.
- Designed Duke's Chronicle's branding and merchandise storefront, boosting sales by 45%.

Goldman Sachs

June 2021 – August 2021

Credit Risk Summer Analyst

Salt Lake City, UT

- Performed comprehensive credit data analysis, leveraging statistical techniques to assign internal ratings to financial institutions, thereby enhancing the accuracy of risk assessments and informing lending strategies.
- Executed live lending transactions while conducting critical asset portfolio management, utilizing quantitative metrics to ensure optimal performance, mitigate risks, and maximize returns.
- Developed a dynamic covenant tracking dashboard using SQL and Python, integrating real-time data feeds to monitor compliance and facilitate proactive risk management for institutional clients.

Colgate-Palmolive

December 2020 – April 2021

Data Science Intern

Remote

- Developed a high-precision supervised learning regressive churn model using R, achieving an 89% accuracy rate, which significantly enhanced the company's customer retention strategies and informed proactive outreach initiatives.

- Created comprehensive customer behavior forecasting models that provided critical insights for marketing teams, enabling targeted campaigns that effectively reduced operational costs by \$500,000 while optimizing resource allocation.

Verizon

June 2020 – August 2020

Data Science Intern

Bellevue WA

- Performed comprehensive analysis of a four-year dataset related to 5G small cell deployments, leveraging statistical methods to identify financial bottlenecks and proposing data-driven strategies that projected a reduction in annual operational costs by \$250,000.
- Implemented a K-nearest neighbors (KNN) predictive model to forecast the cost implications of various 5G cell configurations, providing quantitative insights that informed project feasibility and resource allocation.
- Engineered advanced data visualizations using Tableau and R, transforming complex datasets into interactive dashboards that facilitated stakeholder engagement and data-driven decision-making.

Topia Technology

May 2019 – July, 2019

Software Engineering Intern

Tacoma, WA

- Worked in the Enterprise Data Orchestration Product (SHERPA) team to design and develop data routers, filters, transformers, and plexers that securely handled and transferred data on a proprietary data pipeline in Java.

PROJECTS

NBA Advanced Statistics Website

Feb 2021 – April 2021

- Collaborated with a team of 4 to design and develop an interactive NBA advanced statistics website, providing users with insights into player performance.
- Implemented K-Nearest Neighbors and random forest models to accurately classify and predict player performance metrics, enhancing data-driven analysis.
- Scraped and managed data using SQL relational databases containing extensive datasets on 450+ NBA players, facilitating efficient data storage and retrieval.
- Built and deployed a dynamic website using JavaScript, integrating D3.js for creating engaging, interactive data visualizations, and utilized AWS for scalable deployment.

Human Freedom Index Supervised Learning Model

March 2020 – April 2020

- Analyzed the correlation between political, economic, and social freedom indexes and women's freedom across 162 countries using multiple linear regression models.
- Cleaned and processed datasets from the Human Freedom Index and supplementary country data, filtering for the most recent year to ensure up-to-date analysis.
- Conducted hypothesis testing to identify statistically significant variables affecting women's freedom, including safety, movement freedom, and identity freedoms.

Student Performance Learning Model

September 2019 – December 2019

- Analyzed factors influencing academic performance in Portuguese secondary students, using a dataset of 328 students' demographics, social attributes, and academic records.
- Performed data wrangling to convert self-reported ratings into categorical variables and engineered new features, such as first-generation college student status and stable learning environment.
- Developed and evaluated predictive models, including linear regression, random forests, and ordinal logistic regression.
- Optimized model performance by testing multiple approaches, achieving the highest accuracy with a partial proportional odds model that allowed for variable-specific flexibility.

SKILLS

Coding: Java, TypeScript, Python, JavaScript, R, HTML, CSS

Web Development: Angular, React, Springboot, RESTful, UI/UX Design

Database Management: SQL, MongoDB, Relational Databases,

Data Tools/Frameworks: PowerBI, Pandas, Tableau, Scikit-learn, Ggplot, Shiny, Tidyverse, Plotly, DataIKU, RStudio, Excel, Google Data Studio, Jupyter Notebook

Domain Knowledge: Regression Analysis (Linear/Logistic), Clustering Algorithms, Classification Algorithms, Forecasting Algorithms, Supervised Learning, Unsupervised Learning, Data Visualization, Data Cleaning, Relational Databases, Business Analytics, Data Dashboards, Data Pipelines
